PROFESSIONAL SUMMARY

Computer Science graduate (B.Tech, 2026) with hands-on experience in machine learning, recommender systems, and LLM-based agents, plus a full-stack development internship. Built and deployed an end-to-end ML project (content-based recommender and Random Forest rating predictor) and extended it into a LangGraph tool-calling agent. Seeking an entry-level Data Scientist / Machine Learning role.

TECHNICAL SKILLS

Programming Languages: Python, SQL, C, JavaScript
Machine Learning: Supervised Learning, Regression, Random Forest, Linear Regression, Content-Based Recommender Systems, Cosine Similarity, Feature Engineering, Model Evaluation (R^2), Data Leakage Prevention
Data Science Libraries: scikit-learn, pandas, NumPy, CountVectorizer
Generative AI: LangGraph, LLM Agents, Tool Calling, Groq API, Conversational Memory
Backend and Deployment: Flask, Node.js, Express.js, REST APIs, Streamlit, JWT Authentication
Databases: PostgreSQL, MySQL, MongoDB
Frontend: Angular, React, HTML5, CSS3, SCSS
Tools: Git, GitHub, Git LFS, Vercel, Figma

PROJECTS

CineSense Agent | LLM Movie Assistant (LangGraph, Groq, Streamlit) Live Demo | GitHub

- Built an agentic LLM chatbot on top of CineSense using LangGraph and Groq, with a Streamlit chat interface.
- Designed a multi-step agent graph to handle movie recommendation queries and rating lookups.
- Implemented conditional routing and retry logic to handle queries with no matching results.
- Deployed live on Streamlit Community Cloud.

CineSense | Movie Recommendation and Rating Prediction (Python, scikit-learn, Flask) GitHub

- Built a content-based recommender using CountVectorizer and cosine similarity on movie plot, genre, cast, and director data from the TMDB dataset.
- Trained a Random Forest regression model to predict movie ratings ($R^2 = 0.43$), improving on a baseline Linear Regression model.
- Served both models through a Flask backend with a web interface; managed code with Git and GitHub, and model files with Git LFS.

GATE Assistant | Exam Preparation Web Platform (React, REST APIs)

- Built a web platform for GATE exam preparation with a responsive React-based UI.
- Implemented performance charts for student progress tracking.
- Integrated REST APIs for tests, scores, and user progress.
- Added basic authentication for secure user access.

EXPERIENCE

Full Stack Developer Intern | WYND Technology June 2025 to July 2025

- Developed features on a production project using the PEAN stack (PostgreSQL, Express.js, Angular, Node.js).
- Built UI components and backend API routes, improving reliability.
- Assisted with manual testing and debugging to support smooth deployment.

EDUCATION

B.Tech, Computer Science and Engineering | Government Engineering College, Wayanad 2026
CGPA: 6.48 APJ Abdul Kalam Technological University

Higher Secondary | GHSS Chayoth School 97%

Secondary Education | GHSS Chayoth School 99%
